

# Exploring the Possibilities

Success Story | San Francisco Exploratorium

“At a meeting with several museums from around the Bay Area Thursday evening I recorded the whiteboard notes using Capture and sent them off to everyone afterward. Now all the other museum education departments are interested in having their own system.”

### eBeam Solution

eBeam Complete Systems were donated to help with on-site and distance learning at the Exploratorium and to bring awareness of eBeam products to the more than 15,000 educators who receive training every year through Exploratorium programs.

### Teachers love...

being able to be present during training sessions knowing that all the notes, diagrams, web links, and comments from the session have been captured and will arrive in their e-mail boxes by the time the training has ended.

### Exploratorium Educators say...

We have always struggled with how to bring our programs to those outside the SF Bay Area – this is our answer.

### Challenge

To improve the delivery of teaching training methods and materials to the thousands of educators who come physically and virtually to the Exploratorium Teacher Workshops.

### Meet Eric

Ten years ago, after years as a K-12 science teacher, Eric joined the Teacher Institute at the Exploratorium. He has always been committed to investigating how technology tools can improve the manner in which training programs are designed and delivered. When Eric started using eBeam Complete, he showed the system to his training department members and to individuals in other departments at the museum. It took them no time to see how useful the system would be for running better in-house meetings, bringing on-site trainings to life with multi-media, and in the near future being able to support true distance learning for large and small groups around the world. Recently the Exploratorium hosted a class for a group of science teachers in New Orleans. After the training was complete, everyone of the Exploratorium educators decided next time the class would be shared as an eBeam meeting!
